

## Responsibility for Implementations

This study, not intended to be an academic exercise, includes for each facility recommendations which are meant to be implemented. As previously mentioned two other detailed planning studies are currently in progress. The sum of the proposals set forth in this study serves as a direct input to the contents of one of the studies, Public Improvements Program. In that study, the recommendations from this report are brought one step closer toward reality by having them programmed as realizable projects over a period of twenty years.
